ANYWHERE V1 QUICK INSTALL MANUAL
VEHICLE GPS TRACKING SYSTEM
REVISION A - ISSUE 1
CAV1QIM001

1. GENERAL ANYWHERE V1 HARDWARE

- Mobile GPS transmitter device
- Car charger w/ splice adapter
- OBDII power cable (optional)

You can view the cell towers signal strength as well as the GPS satellite status directly from the mobile screen. The SoftDash Anywhere software harnesses the power of cell tower to assist in the GPS positioning. With cell tower assist, you do not need a direct sky view to get a GPS lock. So you can put the mobile phone unit in an enclosed or “not so open” location and still get good GPS lock. Play around with different convenient areas of the vehicle. Sometimes it might take up to 10mins to reacquire a lock after you have relocated the unit.

2. PLACING THE TRANSMITTER DEVICE IN A NON-DISCRETE LOCATION

You can also use the portable non-discrete method with external power, so that others may track you or for you to track someone such as employees, family members, or children. (An example of a non-discrete area, is provided below)

A. Plug the car charger into the AC power port

C. Press the {Power} key
SoftDash Anywhere starts automatically

B. Plug the other end into the transmitter

D. This is an example of a non-discrete location

3. USING AN ALTERNATE POWER SOURCES

Using an internal power source allows the transmitter to be placed in a discrete location.

3.1 Using The Chargers Splice Adapter

Connect the splice adapter

Finding negative and positive power sources in the fuse box

Adapter connected

Finding negative a positive power sources in the floor wires

3.2 Using The OBDII Connector

Locate OBDII port under dash

OBDII cable connected

Done! No wires showing.

Plug OBDII connector into the OBDII port to power transmitter.

Neatly dress the wires under the plastic panels for a clean and discrete install

4. MOUNTING THE TRANSMITTER DEVICE IN A DISCRETE LOCATION

You can place the Anywhere transmitter device almost anywhere that is discrete and secure from potential threat. For the mobile GPS transmitter, you would want to place it in an area that it is accessible but not visible. Do not burn in an area such as the trunk where metal will obstruct the sky view for GPS lock. (Examples of discrete areas are, provided below)

Tucked in the rear seat

Tucked in the side of rear seat

Tucked into the driver-side dash

Placed in the glasses enclosure

Hidden in the side of rear seat

Hidden into the driver-side dash

Placed in the glove box

Tucked into the center console

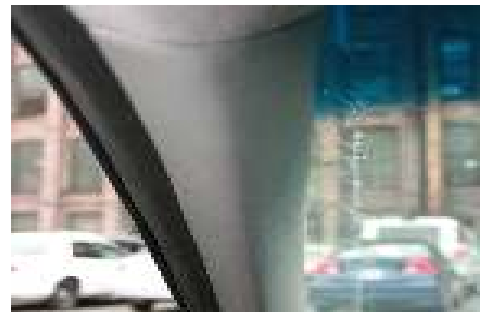

Tucked in the driver-side pillar

Tucked into the seat pocket

Hidden into the center console

Hidden in the driver-side pillar
